- 2010 Linz (Austria)

Linz is a major international center in mechatronics – in 1990 the Johannes Kepler University (JKU) was the first university worldwide offering a full mechatronics curriculum at university level. Recently, the Austrian Center of Competence in Mechatronics (ACCM) was founded in the frame of the excellence program COMET. In its network, ACCM comprises about 100 international company and scientific partners and the turnover in research projects is roughly 8.5 million €/year. The JKU is one of the owners of ACCM and its major scientific partner. As it is one of the missions of ACCM to organize scientific workshops and conferences in disciplines relevant to mechatronics, it was near at hand for ACCM and JKU to jointly bid for organizing a Eurosenors conference. Besides its relevance for technology and research, Linz and its surroundings offer a lot of sights and cultural attractions and I hope that you find the time to enjoy these as well. From the submissions we were able to compile an interesting program – details are given in the TPC Chair's message.

Organizing a conference of this size requires the help of numerous individuals and there is a huge risk of forgetting someone when compiling an acknowledgement list. Thus, in view of this risk and the limited space, I would like to bundle my thanks by first

thanking all authors of and contributors to this conference and our distinguished keynote and invited speakers. All arrangements had to be coordinated by committees who were directed skilfully by Prof. Michiel Vellekoop (technical program committee and local scientific committee), Vienna University of Technology, and Prof. Christian Diskus (local organization committee), JKU Linz. Numerous members of Michiel's institute in Vienna and my Institute in Linz, as well as people at JKU and ACCM have supported our efforts in arranging this event, which is more than gratefully acknowledged. Moreover, volunteers – mostly students and the JKU's IEEE student branch – have helped us out in arranging important details and sub-events, a huge “thank you” is due to them. I am also most grateful to our sponsors and exhibitors for their donations and the arrangement of their exhibits which will hopefully add to the more applied side of our meeting. Last but not least, I'd like to acknowledge the support of the professional partners of the conference, i.e. Oberösterreich Tourismus GmbH (registration, hotel booking, organization of events), ePapers (abstract and paper handling, conference booklet), and Elsevier (conference proceedings).

As a final note, I would like to call to your attention that the Euroensors series of conferences is a quite remarkable thing – it is an independent and autonomous series of meetings that has proven to be highly successful. Coordinated by a steering committee of volunteers, which by the way does not form a legal body of any kind, Euroensors has quickly developed into a European top-conference over the 24 years of its existence. I think all of us have to thank those individuals who have devoted their efforts and ideas to this conference series.

We hope that you find this year's edition as rewarding as the previous Euroensors conferences by having many fruitful discussions, meeting old and new friends, and enjoying your stay in Linz and surroundings!

Bernhard Jakoby  
General Chair

## TPC Chair's Message

Dear participant of Eurosensors 2010 in Linz!

As in previous years, the Eurosensors Conference heads off with the Eurosensors School on Sunday. We found four excellent speakers for the lectures: U. Schmid, *Introduction to micro-systems technology*; H. Zangl, *Analog Signal Processing and Conditioning for Sensor Signals*; S. Bauer, *Organic Materials for Sensors and Actuators*; and M. Brandl, *Optical Sensing in Biomedicine*.

The technical program this year consists of 376 presentations including three keynotes, eight invited talks, 142 orals and 223 posters. In order to acquire a broad overview of industrial sensor activities we invited keynote presenters from one small, one medium, and one large sensor-involved company: A. van Herwaarden (Xensor Integration, the Netherlands); F. Mayer, (Sensirion, Switzerland), and T. Tille (BMW, Germany). Together, these three keynote presentations will give insight in the requirements and needs for sensors to become commercially successful.

The invited talks have been selected from a list that was made up of nominations from TPC members and cover a wide range of sensor and actuator topics: from biological cell analysis to sensor technology and from gas sensors to physical sensors. They are mainly from academia, informing you on the latest research results and insights. We distributed the invited presentations as much as possible within the program so that you have the opportunity to visit several of them providing you with a wide overview of the field. The 142 oral talks will be presented in four parallel sessions. The poster presentations have been scheduled in three large blocks, one on each day of the conference right after the lunch-break.

Some statistic information: All abstracts have been reviewed by at least three reviewers, where about 90% received four reviews. Of the 509 submitted abstracts, 365 were accepted (72%). This relative high percentage is caused by the fact that according to the review scores, the quality of the abstracts was very high: 74% of the papers received a score of 3 points or higher on a maximum of 4 points.

We have received abstracts from no less than 44 countries, the accepted papers come from 39 countries. 17% of the accepted papers are from outside Europe: 12% from Asia, 4% from the Americas and 1% from the Middle East.

Topic wise the largest areas are *Physical sensors* (22%), *Chemical sensors* (16%), *Technology and Materials* (10%), *Applications* (10%), and *Theory, modelling and design* (8%). Runners up are *Biosensors* with 7%, *Microfluidic devices* with 5%, *Optical MEMS* with 5%, and *Interfaces, systems, and networks*, which also

represent 5% of the accepted papers. The number of papers on biotechnological and related topics is increasing which reflects the world-wide trend.

The conference program could come to existence only with the help of a large number of people who were willing to support the Eurosensors Conference. We have 92 TPC members who reviewed between 20 and 25 abstracts each. When the final scores from all reviewers had been received, a Local Scientific Program Committee (LSPC) of ten people came together and finalized the program in a one-day meeting.

The TPC and LSPC were greatly supported by the General Chair, Bernhard Jakoby, and by a group of local postdocs and PhD students from the Johannes Kepler University and the Vienna University of Technology. You will find the names of all those people in this booklet.

It is my pleasure to thank all of you who participated in the creation of the technical program and in particular all the authors who have submitted their latest work.

I wish you a great conference!

Michiel Vellekoop

## Registration Desk

On Sunday evening the registration desk will be set up at the Uni-Center (green coloured building on the campus map) and will be open 17:00–20:00. You are invited to join colleagues in an informal Welcome Reception in the mensa on the ground floor of the same building.

During the conference from Monday to Wednesday, the registration and information desk will be situated in the Keplergebäude (red coloured building on the campus map) in front of the main auditorium (Raiffeisensaal) and will be open 8:00–16:00.

## Keynote Speakers

This year, the Eurosensors conference presents three keynote speakers from industry. In order to acquire a broad overview of industrial sensor activities we invited players from one small, one medium and one large sensor-involved company.

The medium sized company **Sensirion AG** located near Zurich in Switzerland has grown from a start-up to 170 employees today in 12 years, amongst others developing sensors for flow, humidity, and pressure. The managing director, **Dr. Felix Mayer** will discuss innovation for commercial sensors. A1L-A, Monday, 09:30, Room 1

From **BMW** in Munich, the head of the Development Mechatronics/ Driving Functions department, **Dr. Thomas Tille**, will present "Automotive Requirements for Sensors using Air-Quality Gas Sensors as an example". A2L-A, Monday, 10:15, Room 1

In Delfgauw, The Netherlands, the small sensor company **Xensor Integration BV** develops and produces client-specific integrated sensors, but also offers a series of standard silicon sensors. The managing director **Dr. Sander van Herwaarden** will talk about in-company sensor research and development, also illustrated with one or two examples. B1L-A, Tuesday, 09:10, Room 1

Together, these three keynote presentations will give insight in the requirements and needs for sensors to become commercially successful. The talks will be of interest not only for junior and senior sensor researchers, but also for R&D- and market officers from many branches of industry.

## Invited Speakers

Eight scientists have been invited to present a paper on their topic of research. They have been selected from a list that was made up of nominations from TPC members. Invited talks receive a slot of 30 min. for the presentation.

**Winnie Svendsen**, Technical University of Denmark (DTU), Nanotech, Lyngby, DK: "Micro and nano-platforms for biological cell analysis", A3L-B, Monday, 11:30, Room 2

**Isabelle Dufour**, University of Bordeaux, IMS, FR: "Unconventional uses of cantilevers for chemical sensing in gas and liquid environments", C1L-B, Wednesday, 09:00, Room 2

**Srinivas Tadigadapa**, Penn State University, PA, USA: "Piezoelectric MEMS - Challenges and Opportunities", B2L-A, Tuesday, 10:00, Room 1

## Lecture Presentation Information

The duration of a presentation slot is 15 minutes. You will have 12 minutes for the presentation itself and 3 minutes for questions from the audience.

An LCD projector and a computer (Windows XP, MS Powerpoint, Adobe Acrobat Reader) will be available in every session room for regular presentations. Neither Overhead projector, 35mm slides projectors nor VHS videotape player will be available.

Preparation of visuals: please note that individuals using computer projection must either bring their own laptop computer with the appropriate presentation software loaded or bring a USB memory stick containing their presentation. Files can be uploaded to the local PCs in the lecture rooms during the breaks between the sessions. To avoid software compatibility problems (MS Powerpoint), speakers are advised to save their Powerpoint presentation with the Package for CD feature AND bring a backup PDF-version of their presentation.

Speakers should arrive in their session room 15 minutes BEFORE the start of their session to report to the chair person.

## Poster Presentation Information

There will be a large number of posters presented during the three days of the conference. In order to make these sessions run smoothly, some cooperation from you, as a poster exhibitor, is necessary.

First of all, it is essential that your poster is put up before the session and removed after it has ended. The placement of your poster will be marked on the panel, where it will be presented with the number of your poster contribution: e.g. A4P-E (A = first day, 4 = the time slot, P = poster session, E = room E). Look for your number in the conference program.

Please attach your poster to the panel with pins, which are available in the poster area. If you need more pins, please contact the information. After you have removed your poster, please leave the pins on the board.

## WLAN Web Connectivity

The Johannes Kepler University is member of EDUROAM. In case you have an account of your university and your university is also member of EDUROAM, you can use the WLAN the usual way.

## **Austrian Center of Competence in Mechatronics**

The K2 Center ACCM bundles the research competencies of its three founders – JKU, LCM and vatron – to realize their vision: **"To be a leader in mechatronics excellence and a successful European innovation provider"**. The competence center merges science and research with industrial product development and catalyzes an intensive dialog between science and industry.

Together with an international consortium currently consisting of 53 companies and 40 scientific partners, a one-stop shop that is unique and completely novel for Austria has been created. The scientific knowledge from research projects at the Austrian Center of Competence in Mechatronics is implemented by the application-oriented owners of the center – LCM and vatron – as market-ready products for their customers. More than 110 researchers work on joint projects at ACCM.

The competence center conducts research in the following Areas:

Computational and Experimental Process Modeling and Simulation

Mechanics and Model-Based Control

Information and Control

Mechatronic Design of Machines and Components

Sensors and Signals

Wireless Technologies

The individual research projects are organized in a branch/competence matrix. On the one hand, a project is allocated to the competencies of multiple Areas; on the other hand, these competencies are applied across Area boundaries.

ACCM customers profit from cross-branch know how and from the expertise of a network of high-caliber international scientific partners.

## Johannes Kepler University

The Johannes Kepler University (JKU) in Linz, one of the most modern universities in Austria, was founded in 1966 as an Academy for Social and Economic Sciences. Teaching and research activities initially began with a faculty focused on academic studies in the fields of social sciences, economics and legal studies, serving a student body of approximately 600. The Faculty of Technical and Natural Sciences was introduced in 1969, followed by the Faculty of Law in 1975. In the same year, the Academy transitioned to become the Johannes Kepler University (JKU), named after the world-famous and renowned mathematician and astronomer Johannes Kepler.

In the beginning, the idea of a “university campus setting” was a completely new concept in Austria. Situated on the north-eastern outskirts of the Upper Austrian capital of Linz, the campus accommodates approximately 16.000 students and employs over 2.000 faculty and staff. JKU currently offers 29 Bachelor, Masters and Doctorate programs.

From the start, the JKU depicted a new style of university offering interdisciplinary combinations between the fields of economics, social science, law, natural science and engineering, as well as a concentrated focus on its obligations to the community and economy. Today, the JKU not only provides expertise in basic research, but is also the province’s largest institution of application-oriented research.

Subsequently, in addition to traditional institutes, the university has seen an increasing number of institutes funded by third parties and, more recently, the introduction of competence centers which are privately owned companies and other organizations that reflect the important role JKU plays within the economy of Upper Austria. These include: the Research Institute of Symbolic Computation (RISC), the Software Competence Center Hagenberg, the Institute of Application-oriented Knowledge Processing and Numerical and Symbolic Scientific Computing. In addition to the SCCH Hagenberg, the competence centers include the ACCM (Austrian Competence Center in Mechtronics) and the Competence Center in Wood. These university institutes cooperate with large companies as well as small and medium-sized companies that specialize in these particular fields.

*Capture the Concept™*

Simulation of micro electro-mechanical systems (MEMS) is key in delivering increased productivity in new product and systems development throughout high-tech industries. At the micro-scales, designs must consider the effects of several physical phenomena. For example: electromagnetic-structural, thermal-structural, and fluid-structural interactions (FSI) are present in the design of resonators, sensors, actuators, piezoelectric, and microfluidics systems.

The COMSOL Multiphysics simulation environment let you solve problems that couple structural mechanics, microfluidics, electromagnetics and more. These physics can be solved for individually, or in any combination. Built on top of COMSOL, the MEMS Module brings custom interfaces for electrostatic actuation, piezoelectrics, microfluidics, thin film damping, FSI, joule heating with thermal expansion, two-phase flow, and others. Lumped parameter extraction and connection to external electrical circuits via SPICE netlist is made easy.
